

6Ye Life-size Doll Menu

- The doll is made of thermoplastic elastomer (TPE), a material widely used to produce sex toys. It is smooth like human skin and very life-like.
 - The doll's skeleton is made of stainless steel, joints are supported by metal ball joints, allowing dolls to pose like human-being. The smooth skeleton reduces pressure and friction against doll's skin, protect the doll at the highest level.
 - The ball joints skeleton is a patented design by 6Ye. None of other manufacturers can produce this skeleton for the use of dolls. Please beware that the neck is connected to the body by welding. DO NOT over bend her neck to prevent damage to the welding point.
 - The head and body connector is our patent design to ease connecting. It may not fit other dolls
 - Do not use sharp items scratch the doll surface, do not over pinch the doll to avoid damage, which will impact on the appearance of the doll.
 - Do not put on outfits or clothes that will easily transfer color to the doll. Please wash new outfits a few times before putting on the doll. Stain remover is useful to remove the color, but the stain may not be thoroughly removed.
 - Do not put her close to any printed materials, including newspapers, magazines, etc., as well as dark clothing or leather fabrics that easily transfer colors.
 - Do not leave the doll exposed to the sun for long hours. It will directly affect the longevity of the doll
 - After every use, please keep the doll in a straight position, like how she/he arrives in the box. Over stretching her body or limbs for a long period of time will deform her/his original body shape.
 - Overtime of pressure against the doll will lead to dent or marks on the doll surface. You can use a wet cloth to moisturize and cover the spot, then hot air blown on the cloth. After a little while, the dent or mark will disappear.
- * If you want to make the doll in a sitting position, you first need to put the doll in straight lying down. Put pressure on the doll's stomach or body, then pull the legs up. You MUST NOT pull the body up when the doll is lying down in straight. Doing so will break the waist. You also MUST NOT pull the doll's body backward as it will break the waist.

- After a little while, dust or dirt may cover the doll. You can easily use mild shower gel to clean it. You can also use a wet cloth, apply shower gel to wipe her body to remove dirt. AVOID over clean it or scratch it accidentally with nails. After cleaning is done, apply baby powder or cornstarch on the doll thoroughly until the stickiness is gone. This approach will keep your doll fresh, beautiful and long lasting.
- If minor damage happens on the doll surface, it's possible to fix it by yourself. First, clean the wound to avoid any dust or dirt, then use a small stick or toothpick dip in TPE glue (your authorized 6Yedoll sellers are providing TPE glue for free), apply it carefully on the wound, keep the wound close and leave it till dry.
- If any other major problems, please contact your seller, 6Ye doll authorized resellers are responsible for assisting you to fix your lovely 6Ye doll.
- When heating up the doll, you MUST NOT use the doll. You MUST NOT heat up the doll in water to avoid electricity leakage. The heating process takes half an hour up to an hour. However, if the environment temperature is low, the heating process can be prolonged.
 - *Please do not move the doll during the heating process (TPE skin will be softened when the doll is warm, over moving the doll may distort the body shape.
 - *During the heating process, please leave the doll on a soft and flat surface.
 - *Please do not put clothing, outfits or blanket on the doll during the heating process
 - *Please make sure the surface is flat, or wrinkles and dents will leave marks on the doll surface.
- As for standing feet, there are three bolts underneath the feet. If the doll is unable to stand firmly, please adjust the screw and bolt.
